

*Sample of some potential replacement parts*

### **What services can Innovative provide?**

We can machine most things and our services include, but are not limited to:

- Prototype work
- One-offs to low volume production
- Repair, remake, and alter most existing parts
- Duplicate obsolete or broken parts
- Welding
- Fabricating
- Abrasive (sand) blasting

## **Who We Are**

### **About Us**

Innovative Services has been a family owned and operated job shop since 1996. We offer excellent old time quality and service at fair prices. We are a general industrial machine shop meaning that we can offer many different skills for many different jobs.

### **Contact Us**

**We look forward to hearing from you!**

# **INNOVATIVE SERVICES**

*Family owned and operated  
machine shop with wide  
range of capabilities*

*Small view of our machine shop*

### **What equipment does Innovative have?**

We have mills, lathes, a table saw, some drill presses, several saws, and more cutters, inserts, and tooling than you could imagine! If you think a general industrial shop should have something, we probably have it.

**We are not only a small job shop, Innovative can also be your company's new manufacturer!**

Innovative Services has been in business with Original Equipment Manufacturer's for over 20 years and we have the ability to do continuous work for any company who needs a new machine shop to make their parts. We would love to hear from engineers looking to source out some work!

---

*"Wow, you guys can fit a lot of stuff into this place. The shop looks a lot smaller from the outside."*

---

**We love hearing from people interested in having work done as well as companies looking for a manufacturer. If you are someone who thinks there is a service Innovative could provide, please don't hesitate to call!**

*Small view of our abrasive shop*

We have in part of our shop what we call a "dirty shop" which is equipped with a welding room, a sand/glass blasting area, several types of sanders (including a stroke sander), several polishing wheels, a JET lathe used for polishing, and much more.
