

Sample of some replacement parts

What services can Innovative provide?

We can machine most materials and our services include, but are not limited to:

- Prototype work
- One-offs to low volume production
- Repair, remake, and alter most existing parts
- Duplicate obsolete or broken parts
- Welding
- Fabricating
- Abrasive (sand) blasting

Who We Are

About Us

Innovative Services has been a family owned and operated job shop since 1996. We offer excellent old-time quality and service at fair prices. We are a general industrial machine shop which means we can offer many different skills for many different jobs. We may not have state of the art equipment, but we take pride in completing difficult tasks and creating quality results.

INNOVATIVE SERVICES

*Family owned and operated
machine shop with a wide range
of capabilities*

Small view of our machine shop

What equipment does Innovative have?

We have mills, lathes, drill presses, band saws, table saws, chop saws and more cutters, inserts, and tooling than you could imagine! If you think a general industrial shop should have something, we probably have it.

We are not only a small job shop, Innovative can also be your company's new manufacturer!

Innovative Services has been in business with Original Equipment Manufacturers' for over 20 years and we could do continuous work for any company who needs a new machine shop to make their parts. We would love to hear from engineers looking to source out some work!

“Wow, you guys can fit a lot of stuff into this place. The shop looks a lot smaller from the outside.”

We love hearing from people interested in having small jobs done as well as companies looking for a new manufacturer. If you are someone who thinks there is a service Innovative could provide, please don't hesitate to call!

Small view of our abrasive shop

We have in our shop what we call a “dirty shop” which is equipped with a welding room, a sand/glass blasting area, several types of sanders including a wet sander, spindle sander and a stroke sander, several polishing wheels, a JET lathe used for polishing, and much more.
